Description :

PDF-2a489 | This brief provides guidance for the application of cohesive models to determine damage and fracture in materials and structural components. This can be done for configurations with or without a pre-existing crack. Although the brief addresses structural behaviour, the methods described herein may also be applied to any deformation induced material damage and failure, e.g. those occurring during m... *Guidelines for Applying Cohesive Models to the Damage Behaviour of Engineering Materials and Structures (SpringerBriefs in Applied Sciences and Technology)*
